A NEW MODEL IN EARLY STAGE VENTURE CREATION: LESSONS IN ENTREPRENEURSHIP

Dr Suman co-founded Scientific Innovations, a start-up studio designed to test internally generated ideas, build prototypes and once validated in the market, spun off as new entities. He is the CEO of Mirakel, one of the first start-ups from the studio (based on a novel technology to infuse compounds in hair without heat or harsh chemicals). During this interactive session, Dr Suman hopes to share his experience and challenges working on different portfolio companies (in the food, cosmetics, healthcare space) and help build Scientific Innovations over the last 3.5 years between Singapore and New York. Dr Suman holds an MBBS in clinical medicine, MS in genetics, PhD in oncology, and attended MIT as a Sloan Fellow where he received his MBA focused on innovation and global leadership.
