

Two positions: Senior Research Fellow and Post Doctoral Associate for a project involving the development of improved methods for red blood cells low temperature preservation sponsored by the government are now open for application.

Requirements

Senior Research Fellow

- Possess a Ph.D. in the life sciences (biology, biochemistry, etc) or an M.D.
- At least 5 years of research experience with blood cells research/hematology
- Good oral and written communication skills

Postdoctoral Associate

- Possess a Ph.D. in the life sciences (biology, biochemistry, etc)
- Good oral and written communication skills

For both positions, candidates should preferably have an interest in cryobiology, the ability to conduct cell/tissue culture under sterile conditions and able to conduct experiments using immunocytochemical methods. Applicants are required to submit a history of suitable publications. Attendance at scientific conference will be supported.

Responsibilities

- Carry out research experiments
- Write scientific reports and articles

Overqualified applicants (professor emeritus) are welcome as an attractive compensation will be provided. Interested candidates please send or email your full resume in confidence, stating date of availability to Dr. Lilia Kuleshova at the following address / email:
