Applications are invited for the Master of Science (Audiology) programme. Commencing in August 2015, this 2-year, full-time programme integrates academic, clinical practice and research with hands-on experience to give students a holistic and dynamic learning experience.

This exciting programme is offered in collaboration with the University of Melbourne and is designed for graduates with a background in Allied Health, Science, Life Sciences or Engineering. Fresh graduates with a keen interest and individuals considering a mid-career change are also encouraged to apply.

Audiology is an exhilarating field involving the study of hearing, balance and associated disorders. With the opportunity to improve the lives of people across all ages, the prospects for graduates are bright. Possibilities include positions in hospitals, private practice, hearing aid or implant manufacturing companies, industrial or occupational audiology, special needs schools, research and education.

Students will obtain a strong theoretical foundation of hearing sciences, develop practical competencies and possess a good appreciation of:

- Assessment, diagnosis, and management of hearing impairment and disordered auditory-related systems in adults and children.
- Assessment, diagnosis, and management of balance dysfunctions in adults.
- Hearing aid evaluation, verification, and validation for adults and children.
- Programming in implantable devices (e.g. cochlear implant, bone anchored hearing aids, and middle ear implant) for adults and children.
- Basic counseling skills for working with hearing-impaired individuals and families.
