Micro Matters; The Future Returns Us To The Past!

Dr Timothy Barkham
Adjunct Associate Professor,
Department of Microbiology,
Yong Loo Lin School of Medicine,
National University of Singapore.

Abstract
The modern clinical laboratory mixes manual techniques familiar to Koch and Pasteur with high-tech molecular methods and automation. Meanwhile the lack of timely diagnoses mean antibiotics are dished out by the bucket-full and resistance is rampant. Blame growth promoters in animals but the sick and elderly may be more at fault; their deteriorating anatomy infringes the free flow of fluids and fuels recurrent infections. Meanwhile, the starry eyed new generation rediscover influenza, TB continues as the Captain of death and gonorrhoea maintains that love comes at a price. K&P would be devastated. The message? - vaccinate and wear a condom.
