Panton-Valentine Leukocidin (PVL)  
*Staphylococcus Aureus*

Dr. Kean Lee CHEW  
Consultant Microbiologist,  
National University Hospital, Singapore

Abstract

PVL positive *Staphylococcus aureus* has been associated with invasive infections, with high mortality in cases of necrotizing pneumonitis. I hope to share my experience of clinical cases in the UK and discuss the significance of PVL, including the role of PVL testing in our local setting.
