

Weighing up the known risk of excessive UV exposure with a perceived risk of using nanosunscreens

Risk perception influences the process of weighing up potential risks and benefits of using nanotechnology, particularly for sunscreens. This talk will address why nanoparticles are used in sunscreens, how concerns started about nanosunscreens, and whether sunscreen nanoparticles pose a health risk. How recent research findings using a range of techniques, including synchrotron imaging, have helped to clarify the nanosunscreen issue will also be presented.

Speaker :

ASSOC PROFESSOR PAUL WRIGHT

School of Health and Biomedical Sciences
RMIT-University
Victoria
Australia

Tuesday
12th April 2016
3.00pm – 4.00pm

Anatomy Seminar Room,
L2, MD10, Department of
Anatomy, 4 Medical Drive,
NUS.

DEPARTMENT
OF
ANATOMY

Address enquiries to Dr Baeg Gyeong Hun at 65167973 or
Ms Carolyne Ang at 65163200. All are welcome.
