### Course Description

Today, an *outcome-based education (OBE)* model is strongly advocated for the design and delivery of 21<sup>st</sup> century health professional curriculum: the *professional competencies* required for future practice are defined in terms of the intended *learning outcomes* (i.e. the *knowledge, skills, attitudes*) formulated from and aligned to the *end-product capability* (i.e. the desired *attributes* of the *end-product*) identified. Learners need to provide *evidence* of having acquired the desired *professional competencies* by **passing examinations** which use assessment tools (e.g. MEQs, OSCEs) designed for such a purpose.

However, in the *clinical setting* (i.e. in the *work environment*), it is recommended that learners need to show evidence that they have acquired desired *professional competencies* by **independently performing** a given set of **professional tasks**, after a period of learning under supervision. Such '*professional tasks*' performed by the learner independently are referred to as the '**Entrustable Professional Activities (EPAs)**'. Workplace-based assessments tools (e.g. Mini-CEX, DOPS) should be used for assessing EPAs.

### Workshop Objectives

This workshop will:

- discuss the **key features** of EPAs
- provide participants with hands-on experience on how to **formulate EPAs** in their respective disciplines
- describe **how to develop a blueprint** for EPAs closely aligned to the professional competencies identified
- create opportunities for participants to **practice blueprinting** for the EPAs formulated in the different disciplines.
