

# Assessments of Practical / Clinical Skills: Multi-Station Examinations

## Feedback from past participants...

*"Feedback from students, examiners, observers helped in highlighting that what you set as a question might mean different things to different people (a student might read a different message, the examiner another - which might be different from the question setter's thought process)."*

*"I now understand the importance of using SPs."*

## Course Description

Developing high quality assessments to evaluate achievements of desired skill sets for future practice is important in medical / health professional educational programmes. This will ensure practice readiness as well as patient safety .

The workshop will explore contemporary best evidence practices in developing multi-station clinical assessment.

The participants will get opportunities to discuss the strengths, limitations and challenges as well as hands-on training developing these clinical skill assessments .

After this workshop participants will be able to:

- discuss the underpinning educational theories behind skills based assessment
- develop competency standards for pass/fail decisions
- develop a skills station based on best practices
- apply skills learnt to one's own practice environment
