Simulated Patients and Telepsychiatry to Enhance Education

A standardized patient telepsychiatry virtual encounter is a formative evaluation of clinical interview skills, presentation skills, and documentation skills from multiple parties.

In addition to grades for the oral presentation and documentation after the encounter, students receive prompt formative feedback on interview skills from both the standardized patient and educator, feedback and grade on oral presentation skills from the educator, and grade on documentation skills from the educator.

It allows educators to observe a live interview between student and standardized patient with all parties physically separated, of interest to institutions affected by COVID-19 or with geographically separated learners.

Dr Michael MILLER

Department of Psychiatry, University of Texas Medical Branch, United States of America

Dr. Miller is consults director and student clerkship director at UTMB. He trained at UT Houston for medical school and UT San Antonio for psychiatry residency. His involvement in education of learners at all levels of professional training has been recognized with multiple teaching awards. He has had articles on a variety of subjects accepted and published by peer-reviewed journals.

Exploration of Three Allied Health Professions' Perceptions of the Supervisory Relationship and its Impact on Feedback Practices

This is a two-part exploratory study. In the first part, we sought to explore supervisees' perceptions and supervisors' perceptions of their existing or most recent supervisory relationship. Supervisees' perceptions were explored using the Supervisory Relationship Questionnaire (SRQ) while supervisors' perceptions were explored using the Supervisory Relationship Measure (SRM).

We were also interested to understand the feedback reception (supervisees) and provision (supervisor) experiences and how this interacted with the supervisory relationship. As such, we sought to do so in the second part of our study where interested participants underwent semi-structured interviews.

Ms TANG Si Jia Janice

Ng Teng Fong General Hospital, Singapore

Janice is a Senior Speech Therapist at Ng Teng Fong General Hospital who works with adults with swallowing and communication disorders. Her interest is in clinical education and she enjoys engaging in training activities with her colleagues in the department.

Ms LEE Ming Yan Jeanette

Khoo Teck Puat Hospital, Singapore

Jeanette is a Senior Speech Therapist at Khoo Teck Puat Hospital who works with adults with swallowing and communication disorders. She also has an interest in clinical education for allied health professionals and is in the process of completing her CenMED certification.

Date : 7 February 2022 (Monday)
Time : 12.30pm - 1.30pm Singapore Time (30mins each)

Registration closes on 3 Feb 2022
