

THE FUTURE: PREPARING FOR WHAT'S AHEAD

In celebration of NUS Medicine 120th Anniversary, this special edition of the Medical Education Round concludes the “Past, Present and Future” series with a forward-looking discussion featuring distinguished speakers from national healthcare and academic leadership. The session will focus on the opportunities, challenges and changes shaping the future of medical education.

The panel will examine how advancements in AI, genomics, digital health and sustainable healthcare are transforming medical training and care delivery. Speakers will discuss how medical schools must evolve to develop future clinicians who are not only clinically competent, but also adaptable, collaborative and grounded in strong ethical values amid a rapidly evolving healthcare landscape.

The discussion will also highlight how NUS Medicine is responding to these shifts. By encouraging innovation in teaching, cross-disciplinary collaboration and a continued emphasis on both research and compassionate care, the school aims to equip its graduates to shape the future of healthcare in Singapore and beyond.
