Advancing Neighbourhood-based Integrated Care for Older People

Lessons from around the world

As populations age, health and care systems internationally have sought new ways to support older people to live as healthy and well as possible within their own home and community. This webinar examines how community-enabled efforts in health and social care can help to advance population health including the approaches and practices that can successfully grow neighbourhood-based models of care.

Chair: Prof Nicholas Goodwin | Director of Policy, NUS CRiHSP
